

Shoes for Diabetics - Covered by Medicare

Did you know.....Diabetic Medicare patients may be entitled to a pair of extra depth shoes and three pairs of custom molded inserts every year? The therapeutic footwear program has been established by Medicare as a preventive program to lower the incidence of diabetic foot complications. Diabetic patients can develop sores or infections from shoes that are not fitted or selected properly. Patients with bunions, hammertoes, ingrown nails or other foot deformities can prevent complications from these conditions by wearing proper footwear.

Our office participates in the Medicare Diabetic Therapeutic Footwear program. We can fit and help you choose from a wide variety of specially selected shoes that are approved by the program. The shoes have been chosen to provide extra depth and design consideration necessary to prevent diabetic foot complications without sacrificing a fashionable look.
